

ISHANTH S G

Full-Stack Developer (MERN / React / Gen-AI)

+91 9113682181 | ishanth.s.gowda@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

MERN Full-Stack Developer with 3 years of professional IT support and incident management experience, and 1+ years of hands-on development experience gained through independent learning and project work since transitioning out of IT support. I can build full-stack applications using the MERN stack, with working knowledge of Javascript, Redux Toolkit, Tailwind CSS, REST APIs, authentication, and WebSockets. I deploy projects using Vercel and Render, and can also incorporate AI-assisted development tools (GitHub Copilot, Lovable, Cursor, Claude, ChatGPT) into the workflow, including building an AI-integrated MERN application as my project. Currently seeking a junior/entry-level MERN full-stack, React Frontend, or AI-assisted full-stack developer role.

TECHNICAL SKILLS

Frontend: HTML, CSS, SCSS, JavaScript (ES6+), React, Redux, React Router, Tailwind CSS, Responsive Web Design, Figma-to-HTML/CSS Implementation, Bootstrap basics, TypeScript

Backend / Full Stack: MERN Stack (MongoDB, Express.js, Node.js), REST APIs, API Integration, Authentication, WebSockets, NPM, JWT, Cookies, Multer, Puppeteer

Testing and Development Tools: Postman, Chrome DevTools, VS Code, Cursor

Version Control & Deployment: Vercel, Render, GitHub Pages, Git/GitHub Version Control

AI-Assisted Development: GitHub Copilot, Cursor, Lovable, Claude, ChatGPT, Gemini AI Studio

PROJECTS

1. GenAI Interview Planner & Resume Generator (MERN + Gemini AI)

- Built a full-stack MERN application that generates personalized interview preparation content, career roadmap plans, and automated role-specific resumes based on a target job description, self-description, and the user's existing resume.
- Implemented user authentication so logged-in/existing users can view their previously generated interview plans and access the full history of past generations.
- Integrated the Gemini AI model into the core workflow to generate personalized interview content in 8-10 seconds per request.
- Generates structured interview prep content per session — technical and behavioral questions (2-4 each with model answers), a day-wise learning roadmap tailored to the job description, and 2-3 identified skill gaps.
- Built a REST API with 8 endpoints across authentication (login, register, logout, get-user) and core features (generate plan, fetch plan by ID, fetch report history, generate resume PDF), backed by 3 MongoDB schemas (Users, Interview Reports, Blacklisted Tokens) for secure JWT session handling with token invalidation on logout.
- **Tech Stack:** MERN Stack (MongoDB, Express.js, Node.js), React, Gemini AI model, REST APIs
- **Live Project Link:** <https://gen-ai-interview-project-eta.vercel.app/>

2. Student Management System (SMS) — Full-Stack Academic Operations Platform

- Built a full-stack academic operations platform with secure role-based access control for four roles — Super Admin, Admin, Faculty, and Student — each with scoped permissions, protected routes, and JWT session handling.
- Implemented student lifecycle management: CRUD with 20+ fields, department/course/subject/faculty management, profile completion tracking, and attendance marking with bulk updates, monthly calendars, and low-attendance warnings.
- Built core academic operations: exams and marks entry with GPA/CGPA calculation, published results and printable report cards, a notice board with read-tracking and priority announcements, an academic calendar, in-app notifications, and full activity logs/audit trails.
- Designed a responsive, dashboard-oriented UI with reusable components; built collaboratively with AI tooling for rapid scaffolding, debugging, and feature iteration, with hands-on oversight of architecture, design decisions, and code review.
- **Tech Stack:** React 18, TypeScript, Vite, Bootstrap 5, Supabase (Lovable Cloud), JWT Authentication
- **Live Project Link:** <https://student-management-system-rouge-eta.vercel.app/>

3. Movie Watchlist App (Frontend)

- Built a responsive movie browsing application using React, JavaScript, and CSS.
- Integrated the OMDb API for movie search and detailed movie information display.
- Implemented genre-based filtering and persistent watchlist management using localStorage, with a clean UI and smooth navigation.
- **Tech Stack:** React, JavaScript, CSS, OMDb API, localStorage
- **Live Project Link:** <https://ishanth-gowda.github.io/MovieApp/>

4. Shopping Cart App (Frontend)

- Built a responsive e-commerce web application using React, with category-based product browsing and dynamic sorting.
- Implemented add-to-cart functionality and user login/signup, managing application state using React Context API.
- Styled with CSS for a clean, responsive design across devices.
- **Tech Stack:** React, Context API, CSS
- **Live Project Link:** <https://ishanth-gowda.github.io/ShoppingApp/>

5. Weather Forecast App (Frontend)

- Developed a responsive React application displaying real-time weather data and a 3-day forecast, integrating the WeatherAPI for accurate, up-to-date data.
- Built a translucent, Apple-inspired UI with dynamic visuals and smooth transitions, demonstrating strong front-end and API integration skills.
- **Tech Stack:** React, JavaScript, HTML, CSS, WeatherAPI
- **Live Project Link:** <https://ishanth-gowda.github.io/WeatherForecast/>

INDEPENDENT WEB DEVELOPMENT LEARNING & UPSKILLING

- Transition – Full-Stack Web Development**
- Oct 2024 – Present
- Transitioned from IT support into full-stack web development through structured, project-based self-learning, and course certifications from Scaler.
 - Strengthened core JavaScript fundamentals and learned React, Redux/Redux Toolkit, Tailwind CSS, Node.js, Express.js, and MongoDB to build and ship full-stack applications.
 - Built and tested REST APIs using Postman, implemented JWT authentication, worked with WebSockets, and deployed applications using Vercel and Render, using Git/GitHub for version control.
 - Incorporated AI-assisted development tools (GitHub Copilot, Cursor, Lovable, Claude, ChatGPT, Gemini AI) into the workflow for planning, code generation, debugging, and UI development.

PROFESSIONAL EXPERIENCE

- Senior Systems Executive**
- Jul 2021 – Sep 2024
- Cognizant Technology Solutions, Bengaluru
- Handled high-priority incidents and managed the incident queue, performing remote troubleshooting to ensure timely resolution within SLA using the ServiceNow ticketing system.
 - Mentored and supported the technical support L1 team, collaborating with cross-functional teams on issue resolution.
 - Deployed and installed software on client devices for access management, using the knowledge base to deliver consistent, effective solutions based on customer input, and performed authentication checks using Azure MFA and Active Directory.
 - Monitored systems proactively to identify and address issues before escalation.

EDUCATION

- B.Tech in Computer Science**
- 2017 – 2021
- Presidency University, Bengaluru

CERTIFICATIONS

- React Skill Certification – Scaler, 2025 - ([View here](#))
- JavaScript Skill Certification – Scaler, 2025 - ([View here](#))
- Databases & SQL Certification – Scaler, 2024 - ([View here](#))
